

20.24. N LOG N COMPLEXITY

```
for(i = 1; i ≤ n; i ++){  
    for(j = 1; j ≤ n; j = j * 2){  
  
        c = c + 1;  
  
    }
```

SOLUTION:

Here outer for loop runs n times and inner loop runs `logn` times ,hence time complexity is : $O(n\log n)$.
